HW 2
Due Feb 10

Read three papers from the CSUMS library, each from a different area. For each you need to write a short, approximately 0.75 to 1.0 page, description of what the paper is about. This includes why they wrote it, their objectives, what the mathematical problem is, and what methods they use to solve the problem. Also, order them by your interest in working on this for your project (1=most, 2=2nd most, and 3=3d most).
